Swift Software Announces the Release of **JobTraQ X6**
For Task-centric Business Process Management (BPM)

FOR IMMEDIATE RELEASE

Frederick, MD – Swift Software is pleased to announce the release of **JobTraQ X6**, which will be for the use of any organization seeking improved visibility and management of processes, tasks and workflow activities. With a flexible web-based application architecture, JobTraQ easily scales to meet the demands of any environment from 5 person workgroups through enterprises with 1000 or more employees. JobTraQ's design allows for the easy integration of internal and external stakeholders providing complete end-to-end process visibility. JobTraQ version X6 is available now for new customers. An upgrade tool for existing customers will be announced later in Q1.

JobTraQ X6 represents three man-years of design and development effort focused on delivering key improvements to the existing JobTraQ application. Most notable is a **new visual workflow design system** supported by a redesigned and substantially enhanced version of JobTraQ's workflow engine. This new workflow engine's design includes support for a full series of market defining features and enhancements the company will release over the next 24 months. With visual workflow now available, both process owners and designers have an easy-to-use graphical tool to quickly implement complex business activities. JobTraQ X6 also contains numerous enhancements to continuously improve application stability and performance, and to further enhance scalability in the Enterprise. JobTraQ is available as either a subscription-based SaaS or on-premise application. JobTraQ is .NET-based and runs on Microsoft SQL Server. Pricing is available upon request.

JobTraQ X6 is the latest update to a product which first came to market in 2001 and has continued to evolve based on customer deployments and market feedback. Key JobTraQ benefits include:

- Complete visibility to the pending and current workload
- Seamless integration of outside contractors into your workflow activity stream
- Real-time view for internal or external customers into their tasks and projects
- E-mail conversations captured within the context of a task
- Robust permission-based security model tailored to specific users and groups
- Fully integrated business intelligence and reporting capabilities
- Ability to design, test and implement complex workflows in minutes or hours, rather than days or weeks

JobTraQ has been designed to support rapid implementation with minimal external consulting and offers exceptional time to value. Most customers have a production environment running in less than two weeks and a fully-operational enterprise-wide solution in eight weeks or less.

“X6 represents a significant step forward for JobTraQ and represents our commitment to providing cost-effective, high value Task-Centric BPM solutions,” said Vaughn Thurman, Swift Software President and Founder. “Our customers range from small and medium firms to the Fortune 500, and they use JobTraQ to support a wide range of business process and compliance needs including sales, marketing, human capital, IT management, software development, media services, retail operations, quality assurance and risk management. X6 represents our latest solution oriented response to the engaged feedback of our customers.”
